Introduction

This document lists scientific studies and various forms of media coverage relating to [helminthic therapy](#) and closely related topics such as the [Hygiene Hypothesis](#), the [Old Friends' Hypothesis](#), [Biome Depletion Theory](#) and [Evolutionary Mismatch Theory](#).

There are four organisms being used in helminthic therapy:

- * the pig whipworm, [Trichuris suis](#) (TSO)
- * the human hookworm, [Necator americanus](#) (NA)
- * the human whipworm, [Trichuris trichiura](#) (TTO)
- * the rat tapeworm, [Himenolepis diminuta](#) (HDC)

However, not all of the studies and articles listed below are concerned with these four species. Some have focussed on the effects of other helminths, or molecules derived from them, yet all are valuable for the insights they provide about the effects of helminths generally, and of their excretory/secretory products.

Searching the list

If you are interested in helminthic therapy in relation to a particular medical condition, use your device's search function to locate the items that are relevant to that disease. Several conditions will require the use of more than one search term, for example:

- Allergies** - search for "allerg", "atopy" and "anaphylaxis"
- Anemia** - search for "anemia" and "anaemia"
- Arthritis** - search for "arthritis" and "joint"
- Asthma** - search for "asthma", "airway" and "wheeze"
- Autism** - search for "autism" and "ASD"
- Celiac disease** - search for "celiac" and "coeliac"
- Crohn's disease** - search for "Crohn's" and "IBD"
- Diabetes** - search for "diabet" and "insulin"
- Heart disease** - search for "cardio" and "atherosclerosis"
- Inflammation** - search for "inflam"
- Leaky gut** - search for "barrier"
- Multiple sclerosis** - search for "multiple sclerosis" rather than "MS"
- Obesity** - search for "obes" and "adipose"
- Pregnancy** - search for "preg" and "mater"
- Ulcerative colitis** - search for "colitis" and "IBD"

Papers and reports

This section contains links to scientific papers and reports about *individual* studies, listed in reverse chronological order. Papers shown in **purple** mark key stages in the development of the Hygiene Hypothesis and the therapeutic use of helminths. Links shown in **red** are a good place to start if you're new to helminthic therapy, or if you're looking for resources that would help someone else to understand this therapy.

Unless otherwise stated, the main links are to **PubMed** abstracts, with additional links to full text copies and PDFs also provided, if available. Where free full text copies are not available via PubMed, these can usually be obtained from other sources such as **Sci-Hub** and the Facebook group, **Get Your Papers**.

Further papers can be found by searching **PubMed**, which carries almost all the scientific papers written about helminthic therapy.

Review series on helminths, immune modulation and the hygiene hypothesis: how might infection modulate the onset of type 1 diabetes? [Full text | PDF]

Helminths and the IBD hygiene hypothesis This paper proposed that failure to acquire helminths in early life negatively affects immune development, leading to immunological diseases such as IBD later in life.

Do helminth parasites protect against atopy and allergic disease?

Helminth antigen-based strategy to ameliorate inflammation in an experimental model of colitis [Full text | PDF]

Helminthic therapy: using worms to treat immune-mediated disease

2008

Early infection with *Trichuris trichiura* and allergen skin test reactivity in later childhood

***Schistosoma japonicum* infection modulates the development of allergen-induced airway inflammation in mice**

The changing microbial environment and chronic inflammatory disorders [Full text | PDF]

Parasitic nematode modulation of allergic disease

Helminth infections associated with multiple sclerosis induce regulatory B cells

Decreased basal non-insulin-stimulated glucose uptake by diaphragm in streptozotocin-induced diabetic mice infected with *Schistosoma mansoni*

The role of regulatory T cells in multiple sclerosis

Worms and the treatment of inflammatory bowel disease: are molecules the answer? [Full text | PDF]

A helminth immunomodulator reduces allergic and inflammatory responses by induction of IL-10-producing macrophages [Full text | PDF]

Helminth infection with *Litomosoides sigmodontis* induces regulatory T cells and inhibits allergic sensitization, airway inflammation, and hyperreactivity in a murine asthma model [Full text | PDF]

Soluble egg antigen from *Schistosoma japonicum* modulates the progression of chronic progressive experimental autoimmune encephalomyelitis via Th2-shift response

Hygiene hypothesis in inflammatory bowel disease: a critical review of the literature [Full text | PDF]

2007

Worms tame mast cells Edward J Pearce, Nature Medicine

The hygiene hypothesis and the increasing prevalence of chronic inflammatory disorders

***Schistosoma japonicum* eggs modulate the activity of CD4+ CD25+ Tregs and prevent development of colitis in mice**

Stage-specific immune responses in human *Necator americanus* infection [Full text | PDF]

Interrelationship among asthma, atopy, and helminth infections [Full text | PDF]

An inverse relationship between autoimmune liver diseases and *Strongyloides stercoralis* infection [Full text | PDF]

Helminths, allergic disorders and IgE-mediated immune responses: where do we stand? [Full text | PDF]

Infection with a helminth parasite prevents experimental colitis via a macrophage-mediated mechanism [Full text | PDF]

The use of *Trichuris suis* and other helminth therapies to treat Crohn's disease

Helminths as governors of immune-mediated inflammation

Modulation of anaphylaxis by helminth-derived products in animal models

Helminth infection enhances disease in a murine TH2 model of colitis

Helminth-derived products inhibit the development of allergic responses in mice

Association between parasite infection and immune responses in multiple sclerosis (Reports by Science Daily and the BBC, [here](#) and [here](#).) This was the first study to explore the effect of helminth infection on immune response and the natural course of Relapsing Remitting Multiple Sclerosis. It showed that MS was effectively arrested in patients who hosted intestinal worms.

Iatrogenic *Trichuris suis* infection

Inhibition of autoimmune type 1 diabetes by gastrointestinal helminth infection [[Full text](#) | [PDF](#)]

Schistosoma japonicum egg antigens stimulate CD4 CD25 T cells and modulate airway inflammation in a murine model of asthma [[Full text](#) | [PDF](#)]

Regulation of the immune system in metazoan parasite infections

Autism, asthma, inflammation, and the hygiene hypothesis [[Full text](#) | [PDF](#)]

2006

Multiple sclerosis and the hygiene hypothesis [no abstract]

Poor sanitation and helminth infection protect against skin sensitization in Vietnamese children: A cross-sectional study

Dose-ranging study for trials of therapeutic infection with *Necator americanus* in humans [[Full text](#) | [PDF](#)] This study sought to determine the dose of hookworms that would be suitable for use in preliminary therapeutic trials in patients with asthma.

Helminths and HIV infection: epidemiological observations on immunological hypotheses [[Full text](#) | [PDF](#)]

Intestinal helminths: a clue explaining the low incidence of inflammatory bowel diseases in Subsaharan Africa? Potential benefits and hazards of helminth therapy
